Comprehensive **Dysphagia Interventions:**

The Esophagus, Acid Reflux Disease, Oral Hygiene and Water Protocols

SEMINAR DESCRIPTION

Swallowing doesn't end at the pharynx. As such, comprehensive dysphagia interventions cannot consist solely of muscle exercises, maneuvers, compensatory postures, and diet modifications. To ensure the highest quality of care is achieved, dysphagia clinicians must consider other factors that contribute to swallowing difficulties, such as esophageal abnormalities, acid reflux disease, and pharmacology. Presented by and for the clinician in the real-world setting, this clinically relevant seminar will cover in depth:

- Esophageal Screenings and the Role of the SLP
- Acid Reflux Disease and LPR in Adults and Children
- Drug-Induced Dysphagia
- Model for Pneumonia Risk and Prevention
- Water Protocols
- Oral Hygiene Programs
- Xerostomia

"By far, the most dynamic and interesting speaker I have had the privilege of hearing."

"The speaker, topic, and presentation made me feel excited about my field again."

"It's going to change how the field practices Speech Pathology in the medical setting."

"In almost 30 years, I've never yet been to an NSS seminar that wasn't informative, stimulating, and wonderfully organized. The conference with Tom Franceschini tops the list. In the last day and a half, I've been informed, energized, and also entertained."

See more details on this seminar: Comprehensive Dysphagia Interventions:

The Esophagus, Acid Reflux Disease, Oral Hygiene and Water Protocols

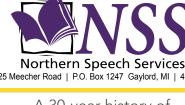

Tom Franceschini, MS, CCC-SLP

Tom Franceschini, MS, CCC-SLP,

is a dynamic, highly soughtafter speaker on dysphagia management. He has a special interest in the esophageal stage of the swallow, and how this impacts swallowing and voice disorders. With 30 years of clinical experience, Mr. Franceschini is able to lecture from a "real world" point of view. He also provides consulting to institutions on opening heartburn and swallowing disorders centers, on implementing free water protocols, and on creating oral hygiene programs.

A 30-year history of providing quality continuing

education programs.

SEMINAR DESCRIPTION

Empowered with the right information and resources, managing and treating elderly clients with dysphagia can be very rewarding. This clinically relevant seminar brings together 8 leading dysphagia experts to examine current research and best practice when addressing the needs of elderly clients with swallowing disorders. Discussion will focus on matching specific treatments with specific swallowing disorders and the decision-making process when employing diet modification, exercise, postures, positioning, maneuvers, or specific techniques related to cognitive loss. The recommendation of nonoral feedings will be covered including discussion of when to terminate service. Also discussed will be the ethics of other

Included will be a specific segment addressing esophageal disorders to help the SLP know when to refer to other health care professionals. Special considerations and treatment suggestions when implementing programs for patients with cognitive loss will be covered. Also included will be a session on pharmacology and dysphagia. Common diagnostic groups and targeted interventions appropriate for these disorders will be discussed for clients with CVA, Parkinson's disease, dementia, and COPD.

SPEAKERS

Ikuo Hirano, MD, Gastroenterologist, is an Associate Professor of Medicine and Fellowship Program Director in the Division of Gastroenterology and Hepatology at Northwestern University School of Medicine in Chicago, Illinois.

nternational lecturer on tracheostomy-dependent patients. She is Director of the Swallowing Disorders Center at the niversity of Pittsburgh Medical Center. Her primary area of research examines the interaction between breathing and wallowing in individuals with indwelling tracheostomy tubes, Parkinson's disease and COPD.

geriatric population. He holds practice privileges in Medical Speech Pathology at Owensboro Medical Health System in wensboro, Kentucky, where he serves on the Stroke Team and the Allied Health Credentials Committee.

onsultant currently in practice in Northeast Ohio. Ms. Brush specializes in geriatric care, rehabilitation programming and nterdisciplinary activity development for dementia. She offers interactive and educational presentations that help audiences to bridge the gap between current research findings and the care needs of their clients and communities.

Outreach Program Manager and Coordinator of the Swallowing Speech And Dining Enhancement Program (SSWAL-ADE) t the University of Wisconsin and at the Geriatric Research Education and Clinical Center within the William S. Middleton Memorial Veterans Hospital in Madison, WI.

of Communication Science and Disorders at the University of Pittsburgh. Dr. Leslie conducts research and lectures nternationally on the topics of dysphagia and aging, ethics and end-of-life decisions in vulnerable populations, and the fundamentals of evidence-based practice.

aula Sullivan, MS, CCC-SLP, BRS-S, is a Speech-Language Pathologist in the Department of Neurology/Speech ection within the North Florida/South Georgia Veterans Health System in Gainesville, FL. Her clinical expertise and search is focused on swallowing disorders in head and neck cancer and at end of life.

ephanie K. Daniels, PhD, CCC-SLP, BRS-S, is a research SLP at the Michael E. DeBakey Veterans Affairs edical Center in Houston, TX. She is also faculty at Baylor College of Medicine and the University of Houston. Her search and clinical work have focused on neurogenic dysphagia.

SEMINAR OBJECTIVES

At seminar conclusion, participants will be able to:

I. Describe the anatomy and physiology of the esophagus and understand how swallowing and voice disorders occur from disorders of the esophagus.

2. Explain Laryngeal-Pharyngeal Reflux and its role in voice disorders.

3. State diagnostic and treatment options for patients with LPR and Acid Reflux Disease.

4. State the differences in the various symptoms of LPR and Acid Reflux Disease as seen in infants, children, teenagers and adults.

Space is limited. Register today at www.northernspeech.com. Phone: 888-337-3866 Fax: 888-696-9655

5. Explain the theoretical basis behind the free water protocol.

6. Identify and discuss patients who can benefit from the water protocol. 7. State the risks and costs of dehydration in the elderly population.

8. List the rules of the free water protocol.

9. Explain how the colonization of oral pathogens contributes to aspiration pneumonia.

10. List components of a comprehensive oral care program.

11. List two medications that can adversely affect swallow behavior

Intended Audience: Speech-Language Pathologists in clinical practice who evaluate and treat clients with dysphagia.
